Dear HR,

I am writing to express my intrinsic interest in the possibility of doing my attachment with your esteemed organization in the field of IT. As a final semester student pursuing a Bachelor's degree in Information Security and Forensics, I am eager to apply my knowledge and skills in a real-world setting to further enhance my understanding of the IT industry.

Throughout my years in academics, I've learned and grasped a number of concepts pertaining to IT and technologies. I am relatively good at programming in languages like Python, C, C++, JavaScript, PHP, and more. Under these languages, I have made many applications and solved quite a few problems. I am also very much grounded with database management systems such as MySQL, and able to build and optimize databases for the efficient storage and retrieval of data.

Above and beyond, coursework has equipped me well with skills that pertain to networking, running from configuration to network gadgets, and implementing sound and strong security measures that shall ensure the overall integrity of network infrastructure. I have possession of good concepts and techniques in cybersecurity, from vulnerability assessment to incident response, risk management, and mitigation. I have also acquired project management skills that enable me to effectively plan, execute, and deliver projects within the stipulated time and budget.

Due to this technical skill in-depth and practical know-how, I can comfortably say that these are some of my strengths as a final year student and at the same time shall be my strong attributes that will be very valuable toward the recruitment as an intern in your organization. It will be great to be part of the team and have many substantial first-hand experiences in the field of IT. Thank you for considering my application.

Sincerely,

Kabala Ronnie
